Ideation Phase
Brainstorm & Idea Prioritization

Date	01 October 2026
Team ID	SWTID-2026-6675
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	4 Marks

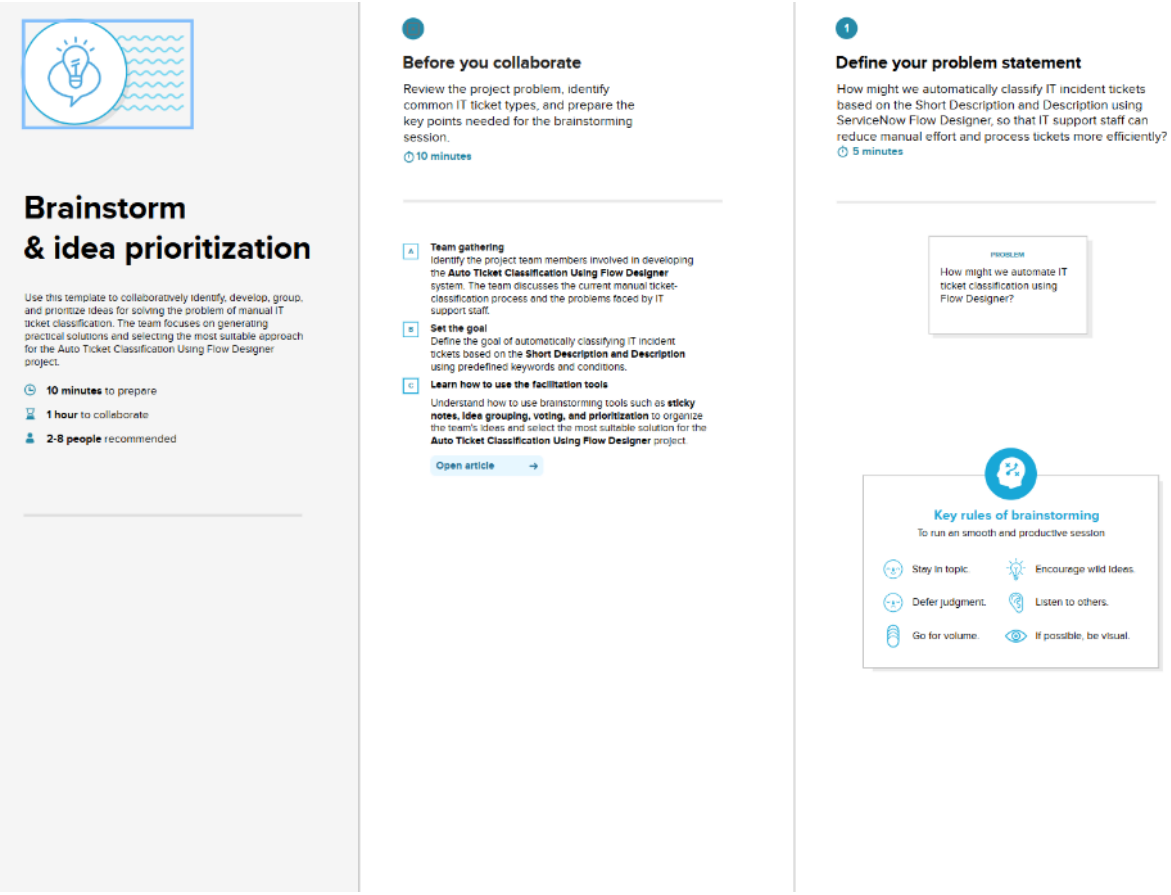

Brainstorm & Idea Prioritization:

Brainstorming was conducted to identify the challenges faced by the school IT helpdesk in handling incident tickets. The team discussed the difficulties of manually reviewing ticket descriptions, identifying the issue type, and selecting the correct category and subcategory.

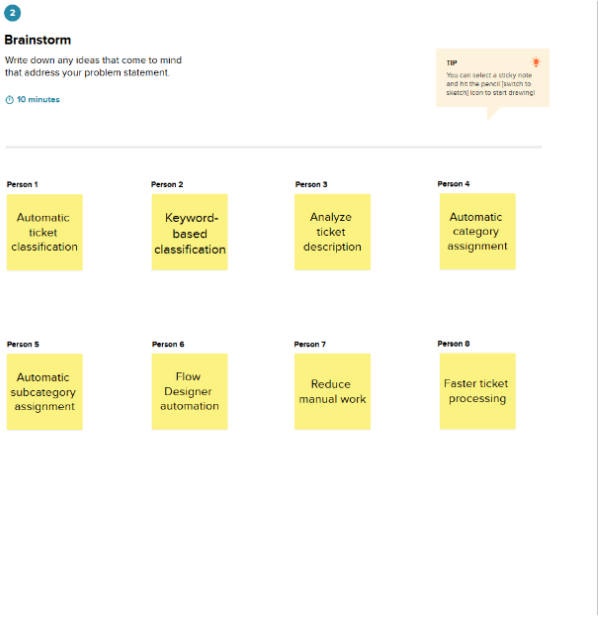

The team generated ideas such as automatic ticket classification, keyword-based classification, ticket description analysis, Flow Designer automation, automatic category and subcategory assignment, reducing manual work, and faster ticket processing.

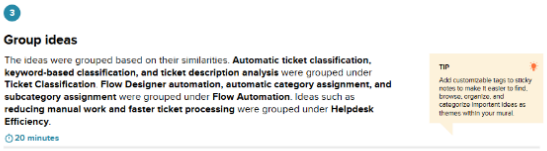

The ideas were then grouped and prioritized based on their importance and feasibility. Automatic ticket classification, keyword-based classification, and Flow Designer automation were considered important and feasible because they directly address the problem of manual ticket classification and can be implemented using ServiceNow Flow Designer.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Step-2: Brainstorm, Idea Listing and Grouping

Step-3: Idea Prioritization
