SERVICENOW

Auto Ticket Classification Using Flow Designer

User Journey Map

Project Users

Stages What does the user do at each stage?	1. Create Incident User submitts an IT-related issue in ServiceNow	2. Capture Information Incident details are stored in the system	3. Trigger & Analyze Flow Designer is triggered and analyzes the incident	4. Classify Ticket System assigns appropriate category and subcategory	5. Notify IT support team is notified about the classified ticket	6. Resolve IT support team investigates and resolves the issue	7. Close Incident is closed with resolution details
Steps What does the user do?	Log in to ServiceNow and create a new incident	Enter short description and description of the issue	Flow Designer is automatically triggered when an incident is created	Flow checks predefined keywords and assigns category and subcategory	Notification is sent to the IT support team	IT support team investigates and resolves the issue	Update resolution details and close the incident
Interactions What interactions does the user have at this stage?	Interact with ServiceNow incident form	Provide incident details (Short Description, Description)	System reads the incident information	Flow analyzes text using predefined keywords and conditions	Receive notification in ServiceNow	Interact with the classified incident and provide support	Confirm resolution and close the ticket
Goals & motivations What does the user want to achieve?	Report the IT issue quickly and easily	Provide clear and accurate details about the issue	Ensure the incident is processed automatically	Get the correct category and subcategory assigned	Inform the support team about the new ticket	Resolve the issue as soon as possible	Complete the ticket with proper resolution
Positive moments What does the user appreciate at this stage?	Simple and easy incident submission	Can provide detailed information	Automatic processing without manual effort	Correct classification of the ticket	Quick notification to support team	Easier to identify the issue type	Ticket is resolved and closed successfully
Negative moments What are the challenges the user may face?	Unclear how to describe the issue	Missing or incomplete details	Keywords not matching the issue correctly	Incorrect category assigned (rare cases)	Delay in notification (if rule not configured)	Need more information to resolve thie issue	Issue not fully resolved and needs reopening
Areas of opportunity How might we improve the experience?	Provide examples or help text in the incident form	Add guidance for entering clear description	Expand keyword list for better accuracy	Regularly review and update classification rules	Send email notification along with platform notification	Provide knowledge base articles for common issues	Collect feedback to improve classification accuracy
