Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	01 October 2026
Team ID	SWTID-2026-6675
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	**Incident Creation**	Create a new incident ticketEnter Short DescriptionEnter Description
FR-2	**Incident Data Processing**	Read Short DescriptionRead DescriptionIdentify relevant keywords
FR-3	**Automatic Ticket Classification**	Apply predefined conditionsIdentify issue typeAutomatically select Category and Subcategory
FR-4	**Incident Record Update**	Update the incident with the identified CategoryUpdate the appropriate SubcategoryStore the classification result
FR-5	**Testing & Validation**	Test Wi-Fi/Network issuesTest Projector issuesTest Password issuesTest Slow Computer issues
FR-6	**Flow Configuration**	Trigger flow when an incident is createdConfigure classification conditionsModify or extend classification rules when required

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	The solution should be simple and easy for IT support staff to use and maintain.
NFR-2	**Security**	Incident information and system configurations should be accessible only to authorized users.

NFR No.	Non-Functional Requirement	Description
NFR-3	**Reliability**	The Flow Designer should consistently apply the configured classification rules to incoming incidents.
NFR-4	**Performance**	The system should classify newly created incidents efficiently without unnecessary manual processing.
NFR-5	**Availability**	The classification workflow should be available whenever the ServiceNow incident management system is available.
NFR-6	**Scalability**	The solution should allow additional keywords, categories, subcategories, and classification conditions to be added as new IT issues arise.
