Project Design Phase-II
Technology Stack (Architecture & Stack)

Date	01 October 2026
Team ID	SWTID-2026-6675
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Example:

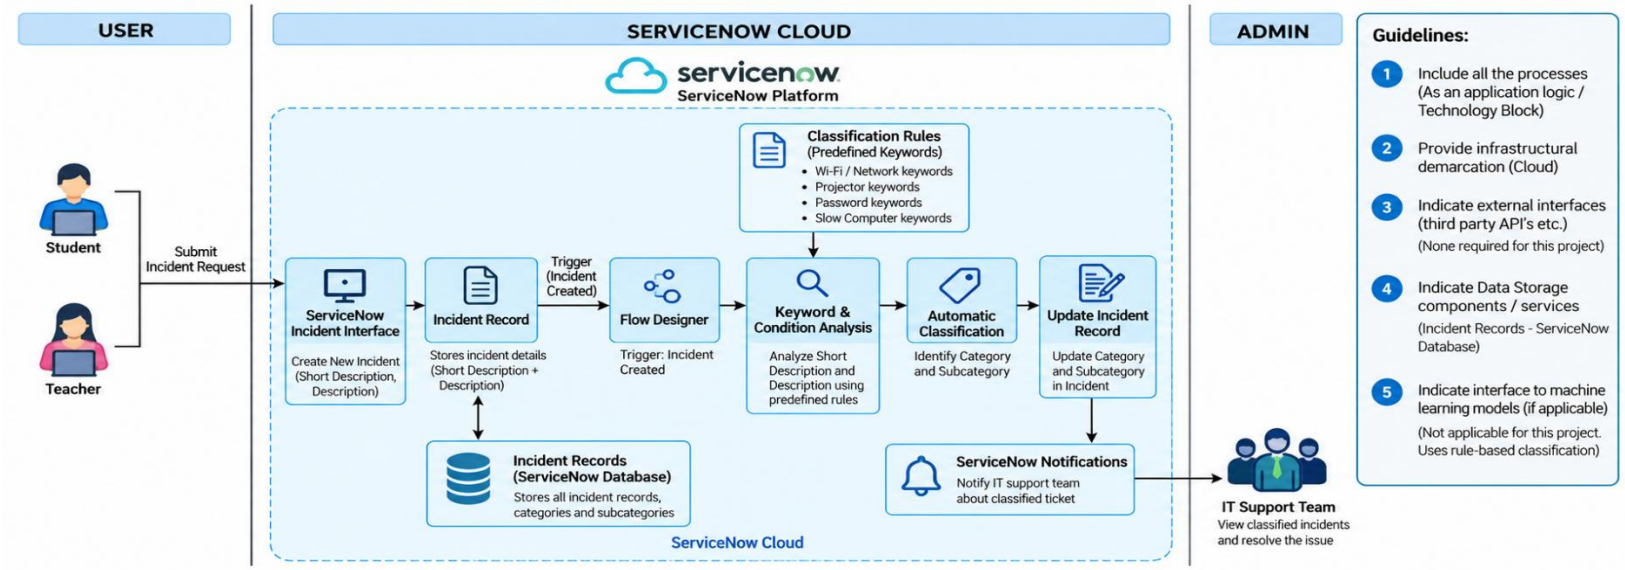

Table 1: Components & Technologies

S.No.	Component	Description	Technology
1	User Interface	Interface through which students and teachers submit IT incident requests and enter issue details.	ServiceNow User Interface
2	Application Logic-1	Handles the automatic workflow when a new incident is created.	ServiceNow Flow Designer
3	Application Logic-2	Analyzes the Short Description and Description using predefined conditions and keywords.	Flow Designer Conditions / Rules
4	Application Logic-3	Automatically updates the appropriate category and subcategory in the incident record.	Flow Designer Actions
5	Database	Stores incident records, descriptions, categories, subcategories, and other ticket information.	ServiceNow Database / Incident Table
6	Cloud Database	Not separately used; data is managed within the ServiceNow platform.	ServiceNow Platform Data Storage
7	File Storage	No separate file-storage service is required for the core ticket-classification process.	ServiceNow Platform Storage
8	External API-1	No external API is required for the automatic classification process.	Not Applicable
9	External API-2	No external API is required for the automatic classification process.	Not Applicable

S.No.	Component	Description	Technology
10	Machine Learning Model	The project uses predefined keyword-based rules rather than a machine-learning model.	Not Applicable – Rule-Based Classification
11	Infrastructure (Server / Cloud)	The application runs within the ServiceNow platform and does not require a separately configured application server.	ServiceNow Cloud Platform

Table-2: Application Characteristics

S.No.	Characteristics	Description	Technology
1	Open-Source Frameworks	No separate open-source framework is required for the core solution. The automation is configured using ServiceNow's platform capabilities.	ServiceNow Flow Designer
2	Security Implementations	Access to incident records and configuration is controlled through ServiceNow user roles and permissions.	ServiceNow Roles & Access Controls
3	Scalable Architecture	New keywords, categories, subcategories, and conditions can be added to support additional types of IT incidents.	ServiceNow Flow Designer
4	Availability	The solution operates within the ServiceNow platform and is available when the ServiceNow instance is available.	ServiceNow Cloud Platform
5	Performance	Automatic classification is performed through predefined conditions, reducing repetitive manual review and allowing incidents to be classified efficiently.	Flow Designer Automation
