Maximum Marks	4 Marks

Performance Testing:

Project Name: Auto Ticket Classification Using Flow Designer

Performance testing is conducted to verify whether the **Auto Ticket Classification Using Flow Designer** system processes incident requests efficiently and performs the classification workflow correctly.

S.No.	Test Parameter	Test Description	Expected Result	Result
1	Flow Trigger	Create a new incident with Short Description and Description.	Flow Designer is triggered automatically.	**Pass**
2	Incident Processing	Submit an incident containing predefined keywords.	Incident details are processed correctly.	**Pass**
3	Keyword Analysis	Enter keywords related to Wi-Fi, projector, password, and slow computer issues.	Relevant keywords are identified by the configured conditions.	**Pass**
4	Automatic Classification	Create different types of IT incidents.	Correct category and subcategory are assigned.	**Pass**
5	Record Update	Check the incident after the flow execution.	Category and subcategory are updated in the incident record.	**Pass**
6	Multiple Incidents	Process multiple incident records.	Each incident is processed according to the configured rules.	**Pass**
7	Notification	Verify notification after classification, if configured.	Appropriate notification is generated successfully.	**Pass**
8	Workflow Reliability	Repeat the same test scenarios.	The flow produces consistent classification results.	**Pass**
