User Acceptance Testing (UAT)

Date	01 October 2026
Team ID	SWTID-2026-6675
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	4 Marks

Project Overview

Project Name: Auto Ticket Classification Using Flow Designer

ProjectDescription:
The project automates the classification of IT incident tickets in ServiceNow. When a student or teacher creates an incident, Flow Designer analyzes the Short Description and Description using predefined keywords and conditions. Based on the identified issue, the appropriate category and subcategory are automatically assigned, reducing manual classification effort for the IT support team.

Project Version: 1.0

Testing Period: 01 October 2026 to 03 October 2026

Testing Scope:

The following features are tested:

- Incident creation
- Short Description and Description entry
- Flow Designer trigger
- Keyword-based analysis
- Automatic ticket classification
- Category and subcategory assignment
- Incident record update
- Notification to IT support team, if configured
- Handling of different IT issue types

User Stories / Requirements Tested:

- USN-1: Submit an IT incident.
- USN-4: Trigger Flow Designer when an incident is created.
- USN-5: Identify relevant keywords.
- USN-6: Automatically classify the incident.

- USN-7: Assign the appropriate subcategory.
- USN-8: Verify the classification result.

Testing Environment:

URL/Location: ServiceNow Development Instance

Credentials: Authorized tester account

Environment: ServiceNow development/testing environment

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Wi-Fi issue classification	1. Create an incident.2. Enter “Wi-Fi is not connecting.”3. Submit the incident.	Incident is automatically classified under the appropriate Network/Wi-Fi category.	Correct category assigned.	Pass
TC-002	Projector issue classification	1. Create an incident.2. Enter “Projector is not working.”3. Submit the incident.	Incident is classified under the appropriate Projector category.	Correct category assigned.	Pass
TC-003	Password issue classification	1. Create an incident.2. Enter “Forgot my password.”3. Submit the incident.	Incident is classified under the appropriate Password category.	Correct category assigned.	Pass

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-004	Slow computer classification	1. Create an incident.2. Enter “Computer is running very slowly.”3. Submit the incident.	Incident is classified under the appropriate Computer/Performance category.	Correct category assigned.	Pass
TC-005	Description-based classification	1. Enter an issue in Short Description.2. Add related details in Description.3. Submit the incident.	Flow analyzes both fields and applies the configured classification rule.	Classification completed successfully.	Pass
TC-006	Empty/insufficient description	1. Create an incident with insufficient issue details.2. Submit the incident.	System does not incorrectly apply an unrelated classification.	No incorrect classification observed.	Pass
TC-007	Incident record verification	1. Open the classified incident.2. Check Category and Subcategory.	Correct classification is displayed in the incident record.	Details displayed correctly.	Pass

Bug Tracking:

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	No critical bugs identified during UAT.	Not applicable	Low	**Closed**	Classification rules worked as expected for the tested scenarios.

Signature: _____

Project Manager: _____

Product Owner: _____

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
